## **Classifying Nuclear Reactions**

**Directions**: Determine the following nuclear reactions as either **alpha**, **beta**, **gamma**, or **electron capture**.

- **Directions:** Complete the following nuclear equations so that they are balanced for both mass and nuclear charge, **then determine the type of nuclear reaction as either alpha, beta, gamma, or electron emission.** 
  - 7.  ${}^{212}_{84}Po \rightarrow \underline{\qquad} + {}^{208}_{82}Pb$  \_\_\_\_\_ 8.  ${}^{239}_{93}Np \rightarrow \underline{\qquad} + {}^{235}_{91}Pa$  \_\_\_\_\_ 9.  ${}^{93}_{43}Tc \rightarrow \underline{\qquad} + {}^{93}_{43}Tc$  \_\_\_\_\_ 10.  ${}^{239}_{96}Cm + \underline{\qquad} \rightarrow {}^{239}_{95}Am$  \_\_\_\_\_

## **Balancing Nuclear Reactions**

**Directions**: Complete the following nuclear equations so that they are balanced for both mass and nuclear charge.

- 1.  ${}^{1}_{1}H + {}^{3}_{1}H \rightarrow \_\_\_$
- 2.  ${}^{27}_{13}Al + {}^{4}_{2}He \rightarrow {}^{30}_{15}P + \_$
- 3.  ${}^{37}K \rightarrow {}^{0}_{+1}e + \_$
- 4. \_\_\_\_\_ +  ${}^{1}_{0}n \rightarrow {}^{142}_{56}Ba + {}^{91}_{36}Kr + {}^{31}_{0}n$
- 5.  $^{240}_{94}Pu \rightarrow \_\_\_+ {}^{0}_{0}\gamma$
- 6.  ${}^{51}_{24}Cr + \_\_\_ \rightarrow {}^{51}_{23}V$

**Directions:** Write a balanced equation for each of the following nuclear changes. You must supply the missing product in each equation.

- 7. Uranium-238 emits an alpha particle.
- 8. Four hydrogen-1 nuclei combine and release two positrons.
- 9. The decay of  ${}^{53}_{26}Fe$  by beta emission.
- 10. Write the balanced nuclear equation for the fusion reaction between a lead-208 nucleus and an iron-58 nucleus. One of the two products is a neutron.

## **Nuclear Chemistry Concepts**

**Directions:** Match the following descriptions with the correct term.

- 1. A procedure that uses positrons to detect many different medical disorders
- 2. A unit used to measure the amount of radiation absorbed by the body
- 3. The annual amount of radiation to which a person is normally exposed
- \_\_\_\_4. A unit used to measure the amount of damage done to a body
- 5. Used to approximate the age of an object using the half-life of radioactive isotopes
- \_\_\_\_\_6. Used in radiation therapy for cancer patients
- \_\_\_\_\_7. Used in smoke detectors
- \_\_\_\_\_8. Shows cross-sectional views of the body
- \_\_\_\_\_9. A unit used to express gamma radiation in the air

- a. rad
- b. CAT scans
- c. Roentgen
- d. radioactive dating
- e. 100–300 mrem
- f. rem
- g. Cobalt-60
- h. Americium-241
- i. PET

**Directions**: Determine if each item pertains to alpha ( $\alpha$ ), beta ( $\beta$ ), or gamma ( $\gamma$ ) radiation.

- \_\_\_\_\_1. Carries an electric charge of 0
- \_\_\_\_\_2. Heaviest of the three particles
- \_\_\_\_\_3. Electrons
- \_\_\_\_\_4. No mass
- \_\_\_\_\_5. Not blocked by lead or concrete
- \_\_\_\_\_6. Carries an electric charge of 2+
- \_\_\_\_\_7. Blocked by paper
- \_\_\_\_\_8. Blocked by metal foil
  - 9. Photons
- \_\_\_\_\_10. <sup>4</sup><sub>2</sub>He

Directions: Determine if each item pertains to fusion, fission, or both.

- \_\_\_\_\_1. Breaking apart of a large nucleus
- \_\_\_\_\_2. Used in nuclear weapons
- \_\_\_\_\_3. Used in nuclear power plants
- 4. Nuclei combine to form a larger stable nucleus
- \_\_\_\_\_5. Energy is released
- \_\_\_\_\_6. Doesn't produce radioactive waste
  - \_\_\_\_\_7. Requires high pressure and temperature to occur

## Half-Life Practice

**Directions:** Solve the following half-life problems.

- Carbon-14 has a half-life of 5730 years. How much of a 500g sample would be left after 22,920 years? \_\_\_\_\_ How many half-lives will have occurred when the sample is 125g? \_\_\_\_\_
- Iodine-131 has a half-life of 8.07 days and is used to treat thyroid problems. After 24.21 days, how much of a 200g sample will be left? \_\_\_\_\_ How many days will it take until the sample is only 6.25g? \_\_\_\_\_
- 3. Polonium-216 takes 0.16 seconds for half of any sample to decay. You have a 5000kg sample of polonium-216 that has been "around" for 1 min 4 sec. How much actual polonium-216 is in your sample?
- 4. The half-life of thorium-234 is 24.1 days. How much time must pass for one-eighth of a given amount of this radioactive isotope to remain? \_\_\_\_\_\_
- 5. The half-life of  $^{232}Th$  is  $1.4 \times 10^{10}$  years. If there are 25.0g of the sample left after  $2.8 \times 10^{10}$  years, how many grams were in the original sample?
- 6. There are 5.0g of  ${}^{131}I$  left after 40.35 days. How many grams were in the original sample if its half-life is 8.07 days?
